400301521

1. The angular resolution of the given motor which makes 48 steps per revolution is

$$\frac{360^{\circ}}{48 \, steps} = 7.5^{\circ}/step$$

- 2. My student number is 400301521, this means the period of one revolution will be 21+33=54
- 3. The time period between two steps of the stepper motor is defined by

the period of one revolution the number of steps

- 3.1. Full step: 54/48 = 1.125 seconds/step
- 3.2. Half step: 54/96 = 0.5625 seconds/step
- 4. Prescaler for both full and half step = (45MHz/10kHz) 1 = 4,499
 - 4.1. Full step: OCR = $54/48 \times 10kHz 1 = 11,249 \ count/step$
 - 4.2. Half step: OCR = $54/96 \times 48kHz 1 = 5,624 count/step$
- 5. Period is initialized to 11250.
